

Metric for train vs test scatter:

MSE

✓ Use log10 scale for MSE

Show test-correlation classes:

- ✓ low
- ✓ medium
- ✓ high
- ✓ failed

For a correlation scatter, point classes use the matching test correlation. For MSE, they use the selected highlighting metric.

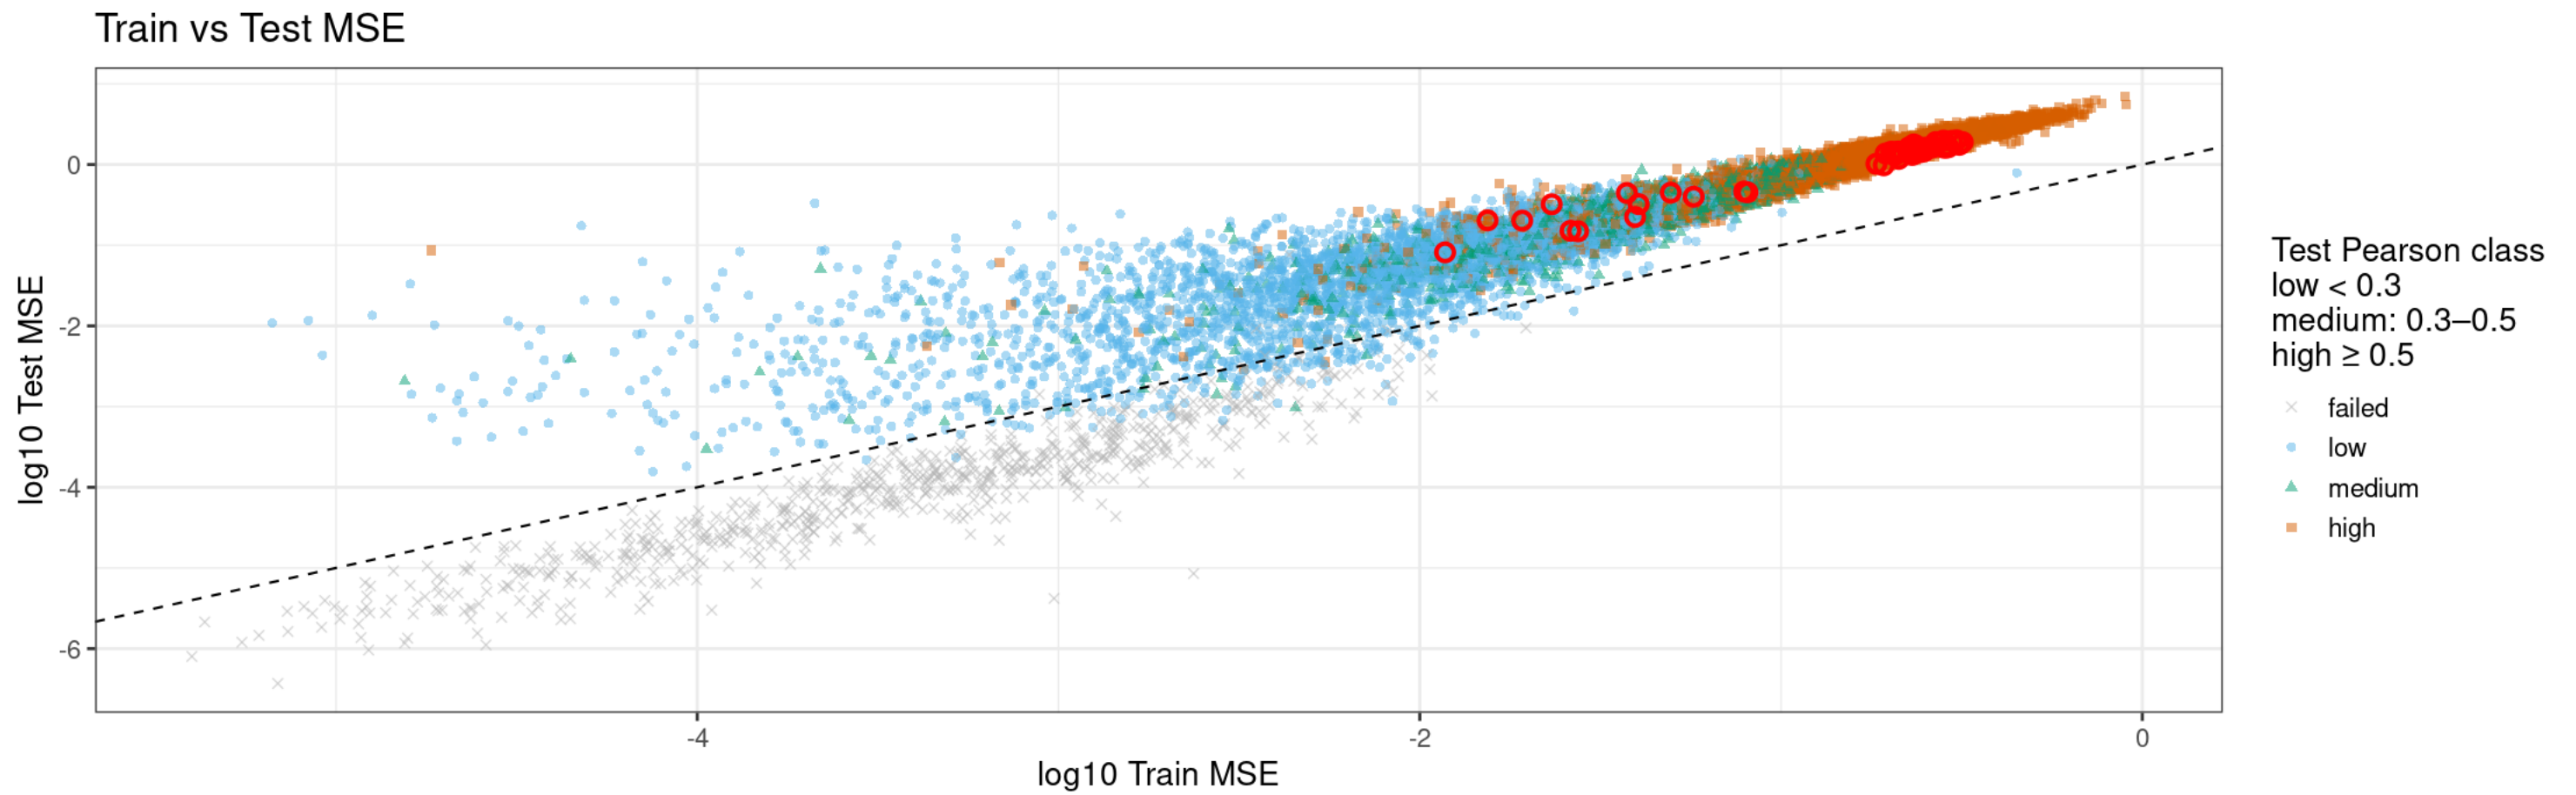

Correlation metric for top-gene highlighting:

Test Pearson correlation

Number of top genes to highlight (0 = none):

50

Train vs Test performance across genes

Top genes among selected correlation classes
