

TF enrichment with PASTAA

PASTAA run mode:

- ☒ Run per gene
- ☐ Run per biological group

Gene-specific analysis

Choose one gene. Feature Importance regions assigned to the selected gene are ranked, deduplicated, and limited to the chosen number of top regions before running PASTAA for each selected cell type.

Gene:

ABHD5

Select biological groups:

Astrocytes:Alzheimer's

Save top N TFs:

10

Max q-value / BH FDR:

0.05

Feature Importance direction:

Positive

Number of top regions:

50

Start PASTAA

Status:

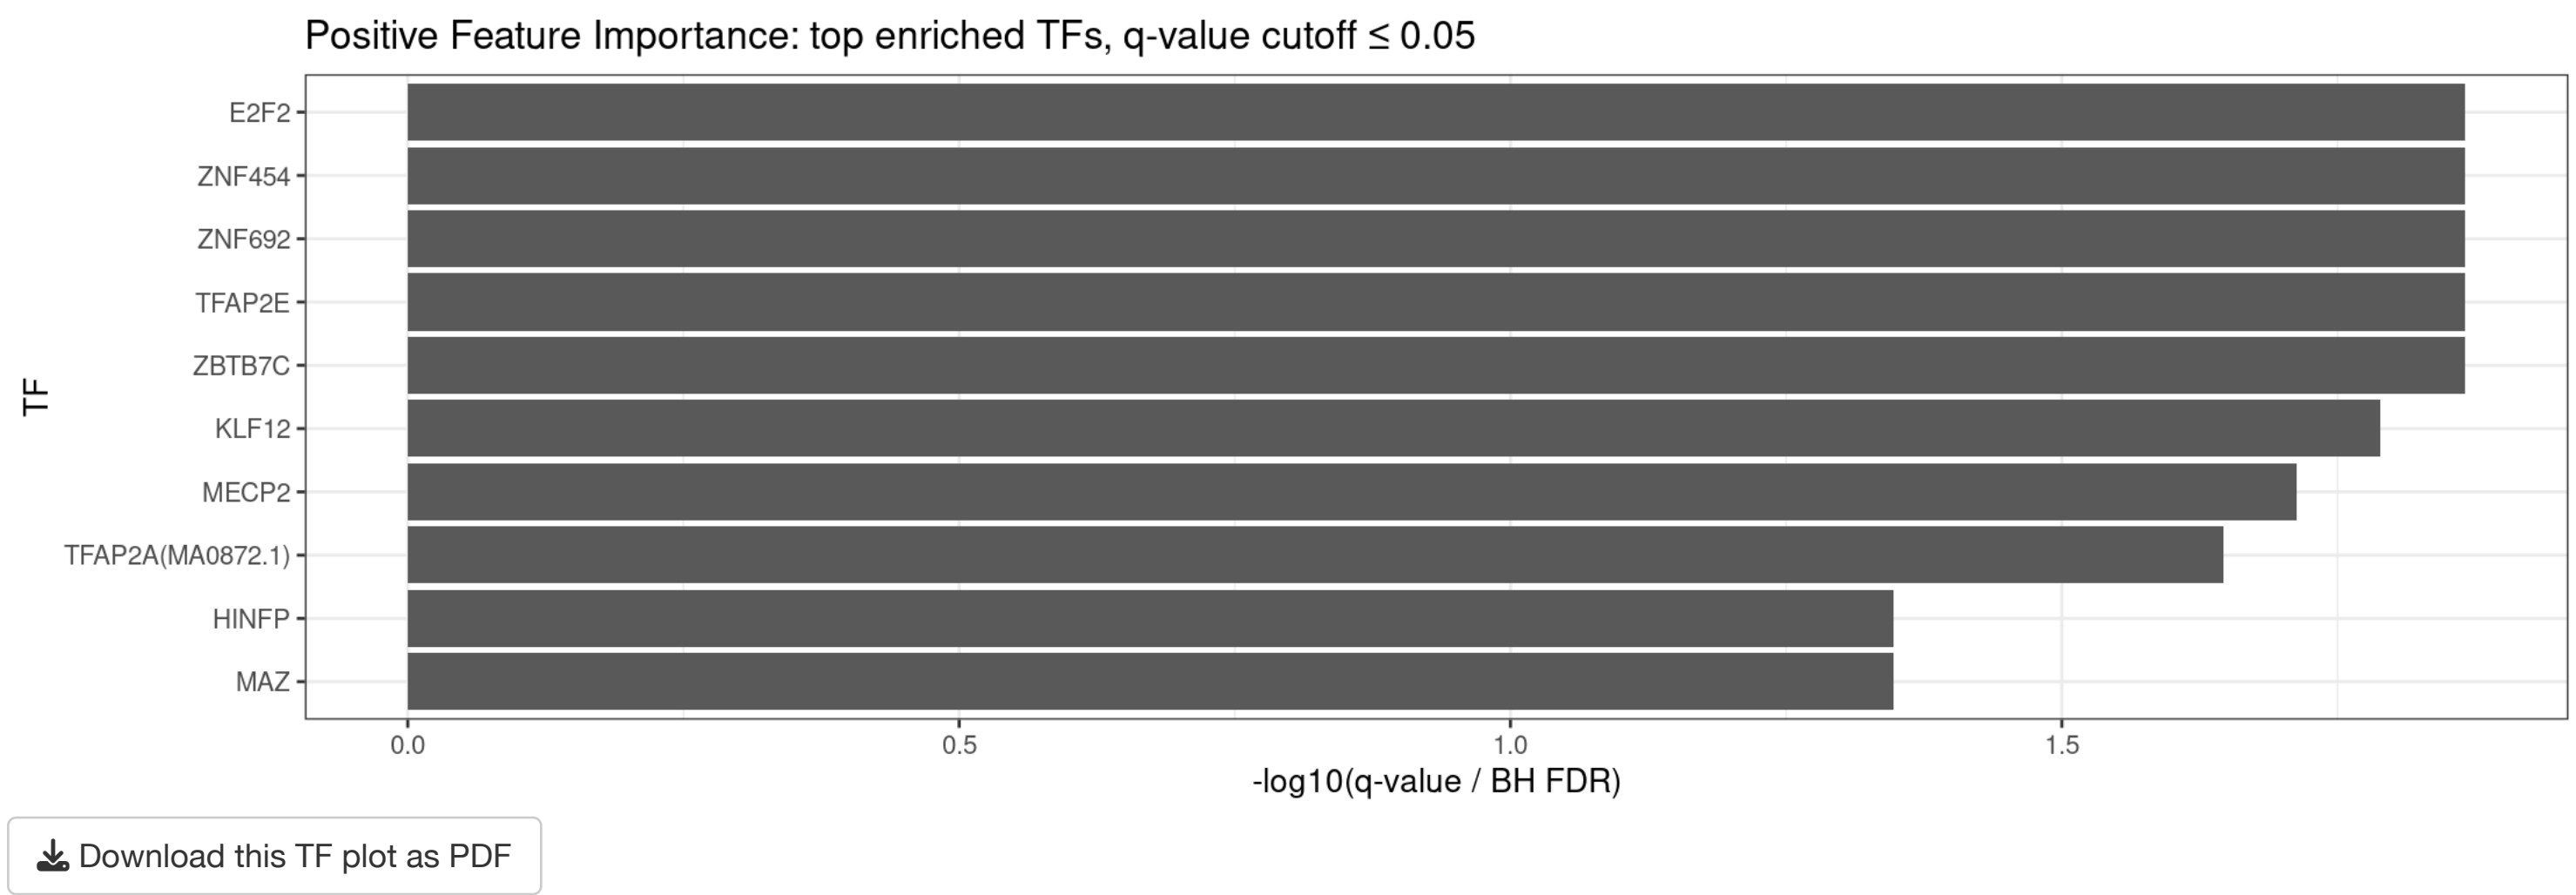

PASTAA loaded successfully. Successful runs: 1 | Top TFs saved:

PASTAA TF enrichment results

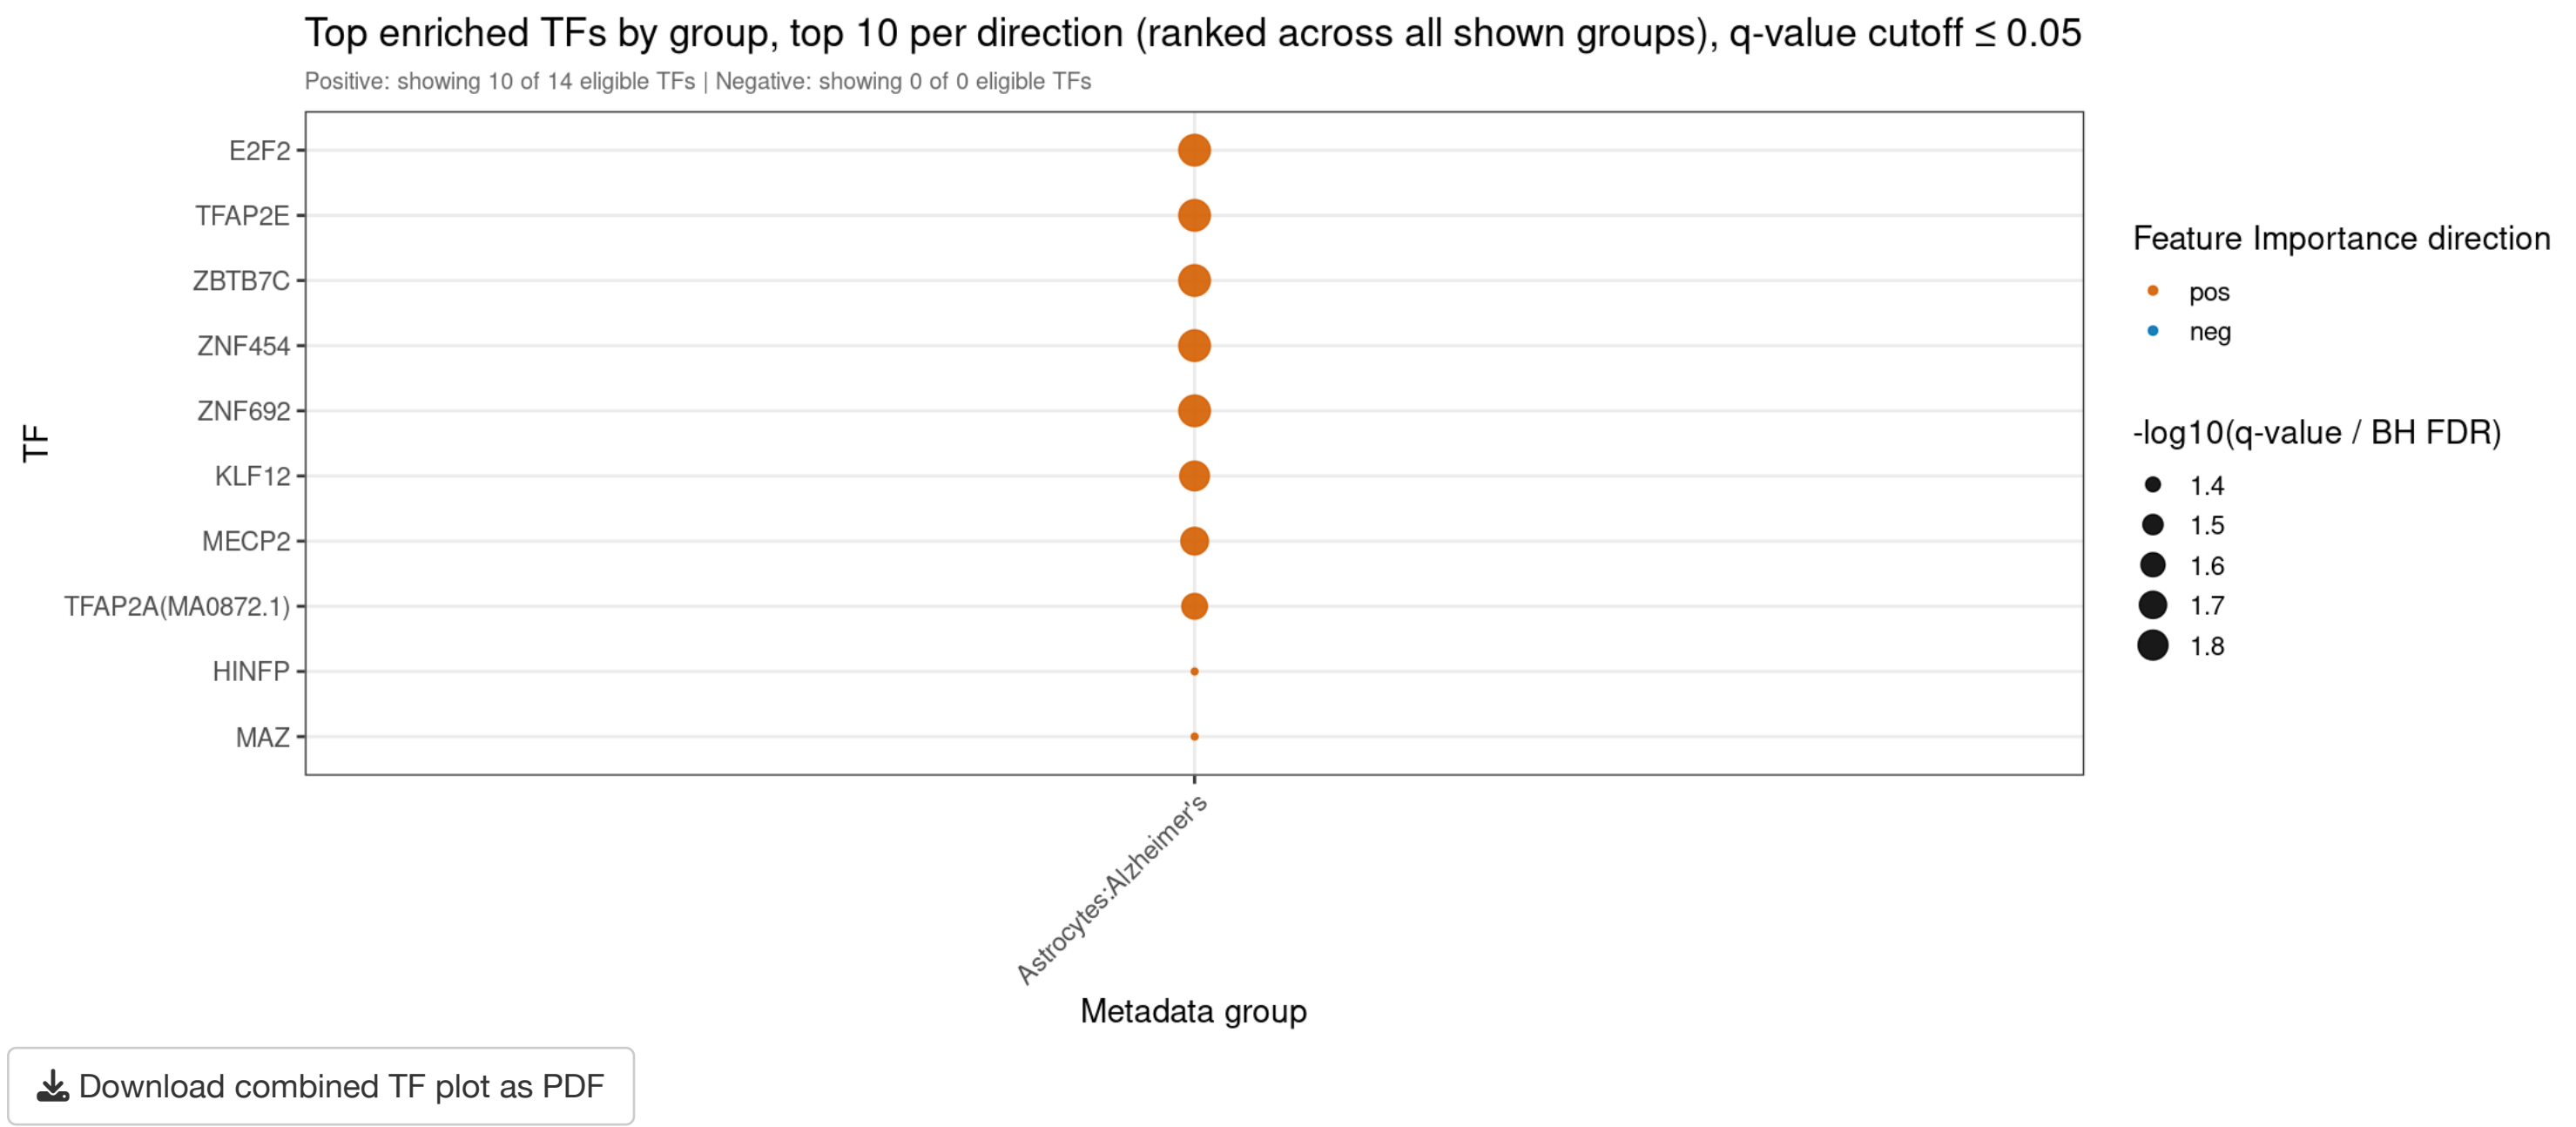

Download PASTAA results

-  Download CSV
-  Download TSV

Positive Feature Importance (current selection)

Positive vs. Negative Feature Importance (combined, by group)

Absolute Feature Importance (by group)

No absolute-direction TF enrichment results are available.

 Download absolute TF dotplot as PDF
